

## Run a wireless lab **remotely**.

Accentury LAMTA is a turnkey solution for managing and automating wireless 3G/4G/5G lab operations.

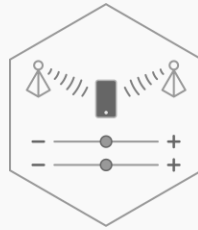

Modules

### Radio Management

Manage 5G/LTE/UMTS/Wi-Fi connections on a dashboard, not on patch panels

### Test Automation

Simulate & automate RF test scenarios like MIMO, handover, and carrier aggregation

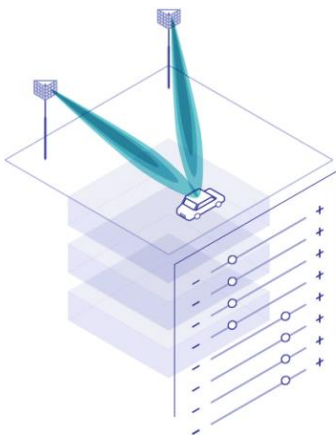

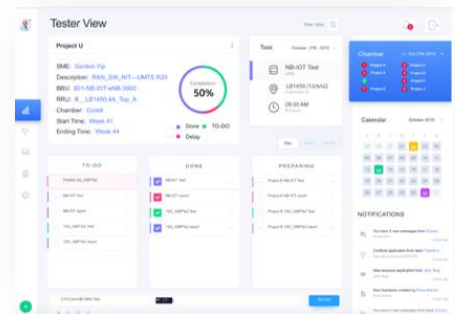

### Resource Management

Track & manage lab resources to improve resource utilization, boost productivity and increase ROI

## Why LAMTA?

- A proven, scalable solution used by Tier 1 operators
- Empower engineers with test scenario automation and remote lab access
- Improve ROI and asset utilization with remote lab access
- Improve lab productivity with an end-to-end solution for lab admins, lab managers, and test engineers

### Scalable & Flexible Radio Management

Radio connection management for 5G/LTE/UMTS/Wi-Fi with real-time radio transit power monitoring

### MIMO, Handover, Carrier Aggregation and Tier Roaming Testing

One-click setup for repeatable testing, RESTful API capability for UE, NE, attenuator and switching control

### Consolidated Lab Resources

Asset monitoring, workflow management, utilization reporting

### Massive MIMO Performance Verification

Verify massive MIMO function and performance in conducted mode
